“YOUR UNLIMITED POWERS”

A Basic course in Neuro Linguistic Programming (NLP)

You have more power than you think!

**By Drs. Sytse Tjallingii,
international certified NLP-
trainer**

How successful are you in your life?

Many people will recognize this: You are not so successful as you wish; it looks as if you always fall in the same pitfall. You have no idea of how this happens and what you could do better. Or: you want to tell a good friend something very important for you and it seems that you don't get connection. Sometimes when you listen to somebody you hear a specific word, which reminds you of a painful incident in the past and you suddenly feel blocked.

Improving your communication with yourself and others

At school nor we did learn to communicate with others nor with ourselves. This fundamental course in NLP is about: How to improve your communication? How to communicate in a way that others really understand you? How do you really reach what you want to reach in your life? Which messages do you want to give to your unconscious? How to become even more successful in your work, your private life, in society?

Sharpen your senses and focus on what you want

Attending an NLP course is a bit like attending a 'driving' school for using your brain more successfully. You will learn to recognize the 'traffic signs' in communication by sharpening your senses and learn more about the different meanings of them. It is about choosing which thoughts you want to focus on. You will learn to see the reality from different perspectives, so you will have more freedom in your interpretations and you will be able to understand better the model of the world of your partners in private, society and your daily life. NLP isn't about the content of your message. It is about the structure of your communication. NLP makes you conscious about unconscious processes and patterns.

Neuro refers to our brains, nerves and senses and representation systems. Our thoughts and behaviour start with the observations by our senses. Neuro means how to bring into play the senses (see, hear, feel, smell, taste) more effectively. To see small changes in someone's facial expression or hear when a voice starts to change. Neuro is about the nerve system. Everything you are doing, thinking or feeling is the result of what is happening in your nerve system.

Linguistic refers to the way we represent our experiences in language. Knowledge and experience are organised in language. Linguistic means to improve drastically the language for the external and internal dialogue, which every human being has.

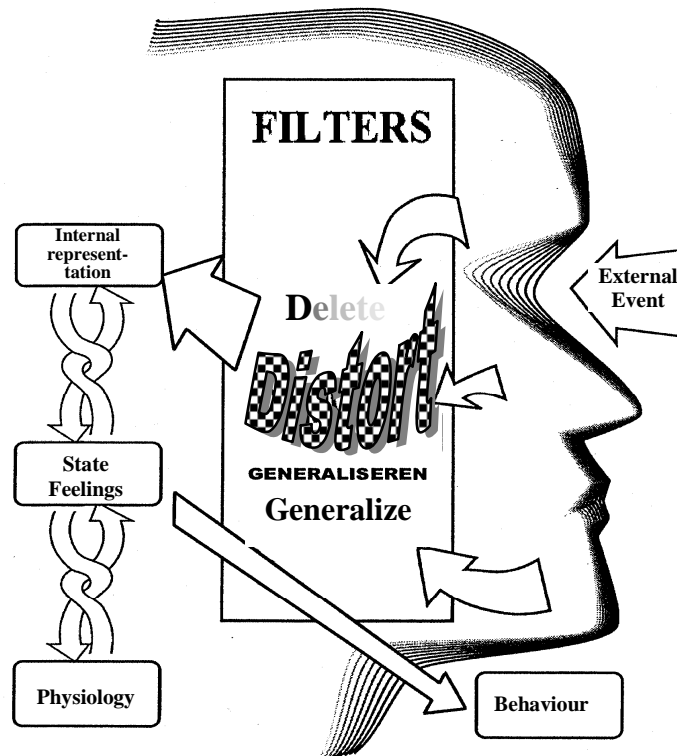

Programming refers to the metaphor of the computer. With a program we mean: the way in which a person takes in information from the outside world or the way in which the memory digests this information to reach results. Programming means that there is a systemic logic in the functioning of our brains and senses, which you can improve by training.

NLP Neuro-Linguistic Programming is a way of modelling successful people.

The subjects:

1. The NLP-model of communication
2. The effective presuppositions of NLP (like the map is not the territory)
3. Sharp use of your senses, visual calibration.
4. The neurological levels
5. To stay at the side of the cause and not of the result.
6. The 4-steps learning process.
7. Your unlimited convictions
8. Your central nervous system cannot keep a denying
9. Representation systems
10. Reframing, the three perceptual positions
11. Meta and Milton language
12. Hierarchy in language

Nelson Mandela: modelling the presupposition of Respect for the model of the world of somebody else and of yourself.

The NLP-communication model, the map is not the territory
